DETAILED ACTION

1. Claims 1-6 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the closest cited prior art [Ratnakar et al. (US Patent No. 6,233,359)] fails to teach or suggest a method of transcoding image data in a compressed format comprising the steps of: decoding differential pulse code modulation DC frequency components of plural image blocks; partitioning the image into a plurality of image cells, each image cell including a plurality of image blocks; recoding DC frequency components of plural image blocks in differential pulse code modulated format, said differential pulse code modulated of said image blocks contained solely within a corresponding image cell; extracting the Huffman tables from the image data; storing said extracted Huffman tables together with an indication of an associated image cell in a header for said image cell; identifying image blocks by a block count; and recoding said identified image blocks into corresponding image cells.

Dependent claims 2-6 are also allowed for the same reasons as above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Eifrig et al. [US Patent No. 6,748,020] and Kretz et al. [US Patent No. 4,292,651] are examples of transcoders.

Art Unit: 2621
